

PROFUSION YOUR BRANCHES

All the hectic operational and infrastructural mishaps of branch office IT closets and server-rooms can be eliminated by just placing one Profusion in each branch. You can then sit back at your central offices and manage all branch offices to the socket level, to the kW of cooling utilization, capacity and temperature just like the rest of your IT assets. The entire server room/closet heating, dusting, probable leakages, noise and vibration, security apparatus, cabling mess can now via the Profusion become one solid IT device managed

at your central command and control center over your cloud. With Profusion installed at each location, all locations will now have the same noise-free, heat-free, wind-free, dust-free totally environment independent Profusion which sits on your IP network and managed central as the cloud of all your branch locations. You can then monitor, command and control, mitigate and plan, migrate, move, expand and consolidate your Profusions as you wish because you will not be dealing with rooms and closets anymore.

PROFUSION APPLICATION IN REMOTE BRANCH OFFICES
