

## PROFUSION YOUR CONTAINER

Containerized data centers using old-fashion raised floor, open rack and compute environment can now be Profusioned. With the Profusion replacing the traditional open racks all the unnecessary noise, vibration and extreme heat/cold presence and energy-loss that currently happens in regular containerized solutions can be eliminated. Profusion will be providing multifold efficiency, safety, security, mobility,

comfort and even faster deployment for containerized data center solutions. Instead of installing open racks in containers that are open to contaminants, to fire and flood and sorts of hazard that may threaten the container or neighboring racks, containerized Profusions can provide a safe haven for rapid deployment IT infrastructure with full automation, intelligence, speed and efficiency in everyway.
