

PROFUSION **YOUR DR**

Your disaster recovery (DR) infrastructure could be as little as few kW and one cabinet to hundreds or thousands of kW and cabinets. Your DR could be situated in room environments or in remote containers. Regardless, you can put your few kW needs into just one Profusion and you can build your entire DR on Profusions inside containers or any room or sheltered environment providing your IT devices added protection, security and control and not to worry about

your cooling arrangements. Profusion will automatically manage and maintain all of that and more for you and provide you remote monitoring and management access for you to be able to have a consolidated management over your DR infrastructure even at the facility level, optimization of use, as well as detailed report and control mechanism for remote management of all assets even at the power and cooling level.

PROFUSION **YOUR DR**
