

PROFUSION **YOUR DATA CENTER**

Building legacy data centers using inferior airflow management tools and methods at the room, row or aisle level are now outdated. You can manage the requirement and need of each given cabinet at the cabinet without affecting any other rack or component in the data center. No longer do you have to build an entire room, cool it, power it, secure and maintain it all because you are planning to grow to the full-room capacity some day! With the micro-modular definition of the Profusion you can now power, cool, secure and maintain only for the cabinets you need today and grow cabinet by cabinet with

respect to your needs. Not only will be operationally 95% more efficient and effective, you will be providing your data center additional security, additional safety and relinquishing operations team from many facets of troublesome and ineffective operational facets. Your data center will run more intelligently, with optimized utilization of resources, highest efficiency and safety, but massive facilities bottlenecks such as data center cooling will be self-maintained and no longer be an unresolved issue.

PROFUSION YOUR DATA CENTER
